SMS Strain™
Retrofittable strain sensor

Technical Data Sheet
The patent pending SMS Strain™ is an autonomous, retrofittable strain sensor that can be easily installed. As opposed to strain gage installation that requires a clean environment and specialised technicians and equipment, the SMS Strain™ can be installed by hand with no special requirements. The sensor measures dynamic strain with high resolution (better than 1 µStrain) and accuracy. Like all 4Subsea SMS sensors, the SMS Strain™ has extremely low power consumption, enabling continuous logging and data storage at 10 Hz sampling frequency for more than 360 days.

Wireless Configuration and Data Transfer
The sensor can be configured via the SMS Magic Hand™ optical modem during mobilisation, and raw data and statistical data can easily be transferred to a topside computer during a logging campaign by letting an ROV hold the SMS Magic Hand™ modem in front of a sensor.

Retrofit Solution
The sensor is developed for easy retrofit installation on subsea structures. It can be installed in the field by hand on deck or potentially also by using an ROV subsea. The sensor is mounted using internal magnets that enable the sensor to grip directly onto the steel.

Multiple Sensors
Up to four SMS Strain™ sensors can be connected by cable to SMS Motion™ sensor/logger, or SMS Gateway™ facilitating synchronised data sampling and logging and thus measurement of both bending moment and tension in a structure.

4Subsea helps operators reduce cost of operations and maximise life of assets using autonomous sensors in combination with data analytics and specialist engineering competence. Products in the Smart Monitoring Sensors (SMS) range are SMS Motion™, SMS Strain™, SMS Magic Hand™, SMS Gateway™, SMS ComCentral™, and SMS Guard™. Technology applications include monitoring of wellhead integrity, risers, mooring lines, subsea spools and manifolds, as well as monitoring of pipelines and subsea structures for oil & gas and offshore wind sub-structures.
### Sensor Specifications
- Full scale range: +/- 2700 µStrain
- Measurement frequency: 10Hz
- Resolution: <0.5 µStrain
- Noise level: <0.4 µStrain rms
- Magnetic force: 50 N

### Physical Dimensions
- Material: Stainless steel 316L
- Length: 80 mm
- Width: 50 mm
- Height: 62 mm
- Weight in air: 950 g

### Environmental
- Operating temperature: 0° C to 30° C
- Storage temperature: -5° C to 50° C
- Pressure rating: 3000 m water depth

### Electrical
- Operating voltage: 3.6 V
- Current consumption: <0.5 mA (logging at 10Hz)

### Typical Service Life Using Batteries
- System current consumption: < 6mA
- Typical service life: 12 months (2° C)
- Optional battery pack: 36 months (2° C)

---

4Subsea is a leading provider of technology and services that help operators maintain production from subsea oil and gas fields and offshore wind farms. By combining expert engineering competence, practical experience and a digital service, we ensure the integrity of assets all the way from reservoir to deck.

The company was established in 2007 and clients include all the major oil and gas operators as well as the large suppliers of subsea equipment. 4Subsea is headquartered in Asker, Norway with additional offices in Bergen, Kristiansand, Stavanger, Macaé, and Rio de Janeiro, and with local presence in Aberdeen and Perth. More info at www.4subsea.com.
